阀座主要材料 Main material of valve seat

EPDM是Ethylene Propylene Diene Monomer的英文缩写，在一般的工业领域EPT、NORDEL、ECD或EPR都是这种材料。三元乙丙是博雷控制提供最为广泛的，也是最为经济的的材料，相对于其他材料如：NBR丁腈材料应用更为广泛。该材料既可以用于阀座密封，也可用于阀板覆盖包胶，更为重要的是博雷控制提供的EPDM材料为食品级的材料，可以放心的用于各类食品领域。

NBR即Nitrile是丙烯腈和丁二烯的聚合物，NBR也是非常好的常用阀座材料，特别适用于碳氢化合物环境的领域，及油品类介质。也是食品级的材料，适用于卫生领域。

PTFE聚四氟乙烯，PTFE包覆橡胶阀座，PTFE包覆粘接在EPDM或NBR之上，橡胶作为阀座的弹性支撑靠背层，用以支撑比较硬质的PTFE材料，共同组成一个完整的阀座，由于EPDM或NBR被PTFE包覆，具有了一定的弹性，因此，扩大了适用范围。PTFE较适合有腐蚀性的领域。该材料既可以用于阀座，也可用于阀板覆盖包覆。

EPDM is the abbreviation of ethylene propylene diene monomer, which is used in general industrial fields such as EPT, NORDEL, ECD or EPR. EPDM is the most widely and economical material provided by Bolley Control, which is more widely used than other materials such as NBR nitrile. This material can be used not only for valve seat sealing, but also for valve plate coating. More importantly, the EPDM material provided by Bolley Control is food grade material, which can be safely used in various food fields.

NBR, nitrile, is a polymer of acrylonitrile and butadiene. NBR is also a very good common valve seat material, especially suitable for the field of hydrocarbon env–ironment and oil media. It is also a food grade material, suitable for the field of health.

PTFE polytetrafluoroethylene, PTFE coated rubber valve seat, PTFE coated and bonded on EPDM or NBR, rubber as the elastic support backrest layer of valve seat, is used to support the relatively hard PTFE material, and together constitute a complete valve seat. Because EPDM or NBR is covered by PTFE, it has certain elasticity, so it expands the scope of application. PTFE is more suitable for corro–sive areas. The material can be used for both valve seat and valve plate covering.

1. Upper flange: standardized driving device flange, conforming to ISO5211.
2. Body: Ductile iron and other materials applicable.
3. Valve plate: streamlined valve plate can effectively reduce pressure loss and flow loss. The edge of valve plate is processed by spherical surface and polished by hand. It has the characteristics of small operating torque, long service life of valve seat and good sealing performance. It can be selected according to various materials of medium, and it is linked with the internal transmission of rotating shaft, with better anti-corrosion performance.
4. Rubber seat: the new spherical sealing design is also adopted at the edge of the valve shaft through part, replacing the traditional butterflyThe protruding design of the valve seat surface perfectly combines with the valve plate. Reduce the friction between valve plate and valve seat, so that the opening and closing forceLighter moment and longer service life. Shoe seat and integral valve seat can completely isolate the valve body from the medium, and Compared with other structure valves, the valve seat is more firmly installed with very low torque value, and there is no need to add additional flange gasket at both endsit can be applied to various materials and pipe ends (lug type).
5. Stem: the center type double half shaft stem is designed to be driven by flat,square and hexagonal valve plates, with two-way sealing without leakage and installation without flow restriction.
6. Shaft sleeve: copper alloy, more wear-resistant, effectively reduce torque.

对夹式蝶型止回阀 Wafer Butterfly Check Valve

产品概述 Product Overview

博雷控制生产的对夹式蝶型止回阀由阀体、阀瓣、阀杆及弹簧等零件组成，采用国外先进结构设计，符合有关国家标准，属节能型产品。对夹式蝶型止回阀由于阀瓣的关闭行程短，并且有弹簧加载，可显著减少水锤现象。因其结构长度比一般止回阀短，对有安装空间限制的场所最为适用。此产品止回性能好，安全可靠，流阻系数小，主要适用于石油、化工、食品、医药、轻纺、造纸、给排水、冶炼及能源等系统，作为单向阀使用。

产品特点 Product Features

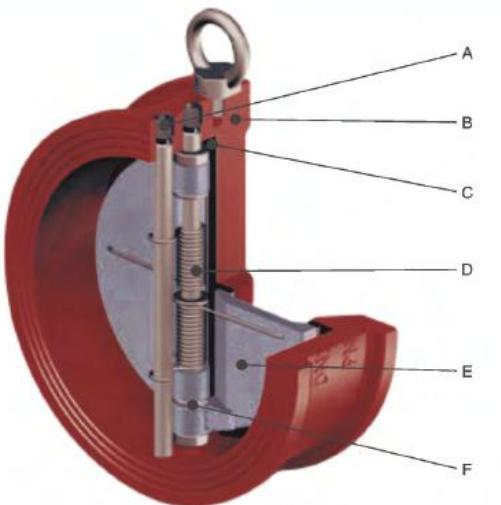

1. 体积小，重量轻，结构紧凑，维修方便。
2. 阀板采用对偶式，在弹簧的弹性力矩下可自行速闭。
3. 因速闭作用，可防止介质倒流，消除水锤作用强。
4. 阀体结构长度尺寸小，刚性好，安全可靠。
5. 达到完全密封，水压试验泄露为零。
6. 安装方便，可用于水平垂直两个方向安装。
7. 法兰连接尺寸符合GB/T17241.6-98之规定。
8. 结构长度符合GB/T12221-89、ISO5752-82之规定。

对夹式蝶型止回阀 Wafer Butterfly Check Valve

对夹式蝶型止回阀 Wafer Butterfly Check Valve

A 轴端紧固螺钉：有效防止轴窜动，避免阀门工作失效及轴端泄露。

B 阀体：结构长度尺寸小，刚性好。

C 橡胶阀座：硫化在阀体上，牢固可靠，达到完全密封。

D 弹簧：使用双弹簧，将负载力均匀的分散到每块阀板，使得介质回流时能迅速关闭阀门。

E 阀板：采用对偶板和两个扭力弹簧的组合设计，可使阀板自行速闭，消除水锤。

F 垫圈：可调节装配间隙，确保阀板密封性能。

A Tighten screw shaft end: Effectively prevent the axis motion, avoid valve failure and shaft end leakage.

B Body: Structure of small length, good rigidity.

C Rubber seat: Sulfide in the body, solid and reliable, to completely seal.

D Spring: Use double spring, will load evenly dispersed to each valve plate, when the medium return can quickly close the valve.

E Plate: Using dual plate and the combination of the two torsion spring design, can make to quick closing valve plate, to eliminate water hammer.

F Gasket: Adjustable assembly clearance, to ensure that the valve plate seal performance.
